## FAMOC 5.0 - FAQ

You can give users quick access to corporate apps by creating corporate store for iOS devices. Corporate store will be available as a webclip - separate icon that looks like an app. In the store you can publish any app, which could be later downloaded without the necessity to log in with Apple credentials.

Before you can enable corporate store you have to add selected applications to FAMOC. To do so, navigate

to APPLICATIONS tab. Hover over 📩 icon and select Add application from Apple App Store.

Enter the application name. Make sure that Enable in corporate store is marked and click Apply. Application will now be available for iOS users in your organization.

Action box						
Select action Add application from Apple App Store	Select application	Confirm Add application from Apple App Store				
♥ Quick actions	<ul> <li>▼</li> <li>19.0, Mazilla</li> <li>●</li> <li>●</li> <li>■</li> <li>■</li></ul>	Name: Firefox: Private, Safe Browser Price: Price: Enable in corporate store Application group: Browsers				
	firefox ×	Platforms: More V V				

To enable corporate store on the devices go to Devices list. Select iOS devices from the list.

Once you have selected appropriate devices click More actions button . It will open an Action box. Select Quick actions and then Enable corporate store.

NOTE: If you select any devices with different OS you will see a warning about unsupported items. They will be highlighted in red on the list. Operation will not be performed on those devices.

After successful operation, new icon will appear on the device.

NOTE: You can change the icon by replacing the webclip.png file in /aplikacje/branded/webclip.png on server.

In the Corporate store you will see all the apps and configurations that were enabled in FAMOC console. Apps are separated in categories.

You can also add your own categories in the APPLICATIONS view.

## FAMOC 5.0 - FAQ

NOTE: Remember that if you are using the iOS white list, you must add the WebClips package to the list. In the Policy Template go to Security options > Application policy and in the section Apple application list > Whitelisted entries add bundle ID: *com.apple.webapp*.
