1 What is Cisco Secure Endpoint

Cisco Secure Endpoint provides comprehensive protection against malware attacks. It prevents attacks, blocks malware, and constantly monitors and analyzes file and process activity to quickly detect, mitigate, and remove threats that might bypass other security measures.

Cisco Secure Endpoint integrates prevention, threat detection, and response into a single solution, leveraging the power of cloud analytics.

2 Adding Cisco Security Connector to FAMOC manage

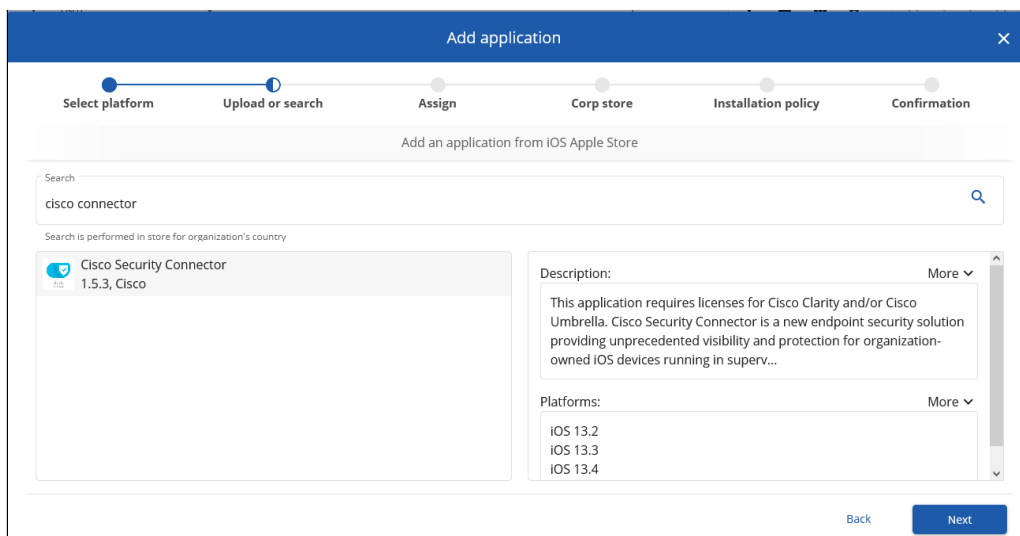

For the Cisco Secure Endpoint service to function properly, the Cisco Security Connector application must be installed on the devices. Cisco Security Connector can be added to FAMOC manage just like any other application. Simply go to the APPLICATIONS tab and click + button to add a new app.

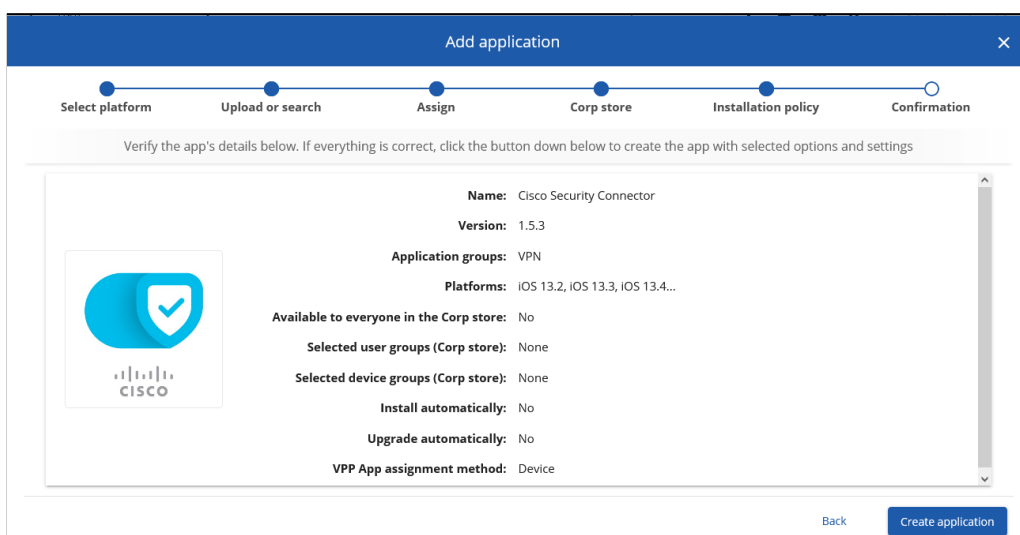

Then select the platform - Apple. Select the option to add an application from the iOS Apple Store.

Enter Cisco Security Connector in the search field, select the appropriate application from the list, and click Next.

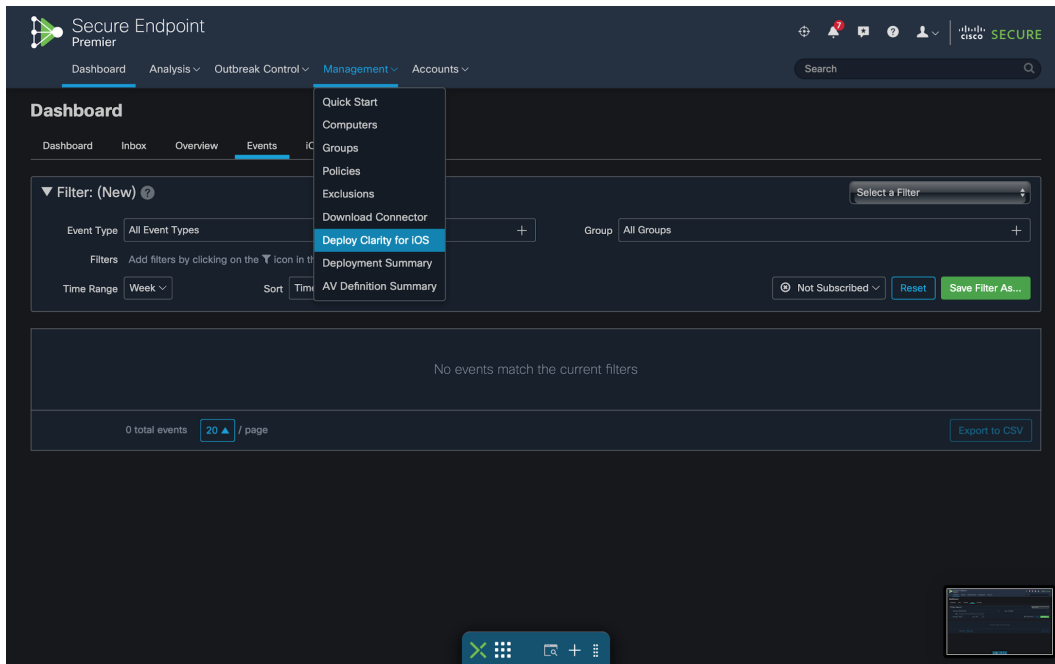

Then continue with the steps up to the confirmation screen.

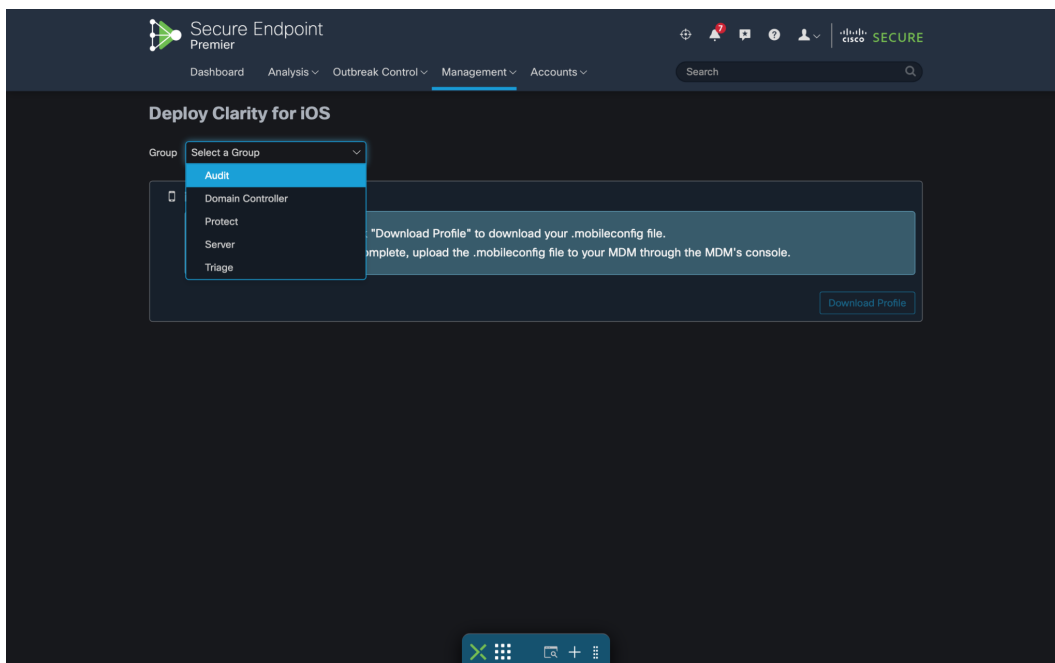

2.1 Cisco Security Connector configuration in FAMOC manage

To properly configure the Cisco Security Endpoint service, a dedicated configuration implemented in FAMOC manage should be used. For it to work properly, we also need a configuration file downloaded from the Secure Endpoint portal - <https://sso-apps.security.cisco.com/>.

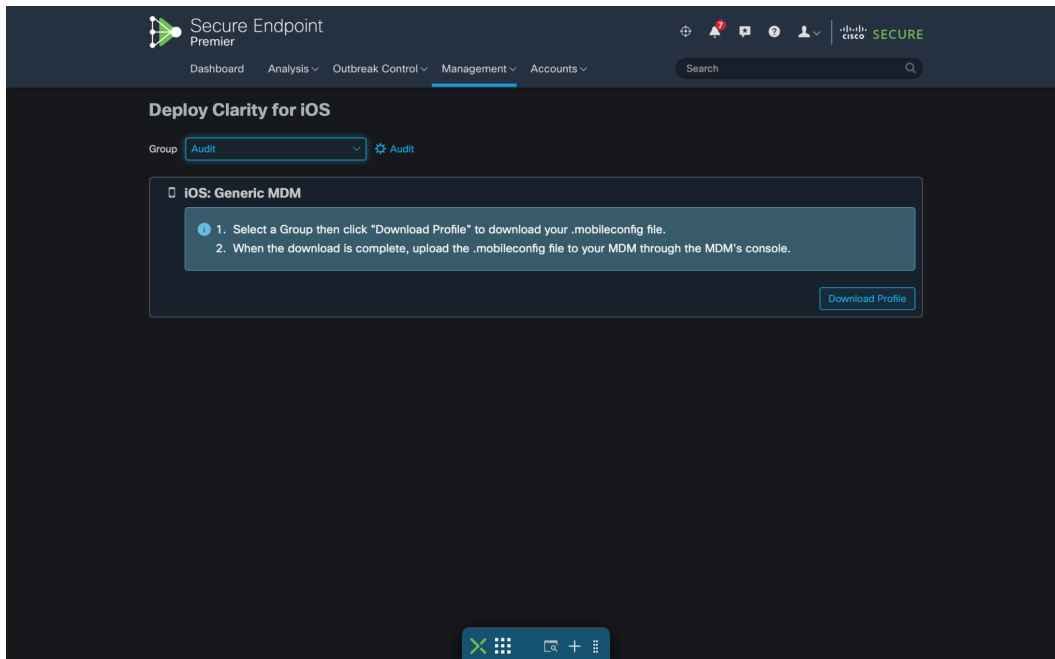

After logging in to the console, from the Management tab, select the Deploy Clarity for iOS option.

Then select a group of devices from the list (it must be previously defined in the Cisco console).

Download the file by selecting the Download profile.

Then we log back into the FAMOC manage console. Go to the CONFIGURATIONS tab and add a new configuration by clicking the plus icon in the upper left corner

Select Apple Platform, then iOS, iPadOS. Select the configuration type - Security and the configuration named Cisco Secure Endpoint (AMP) iOS Settings.

The screenshot shows the 'New configuration' wizard with the 'Configuration type' step selected. The progress bar indicates the sequence: Platform, Configuration type, Configuration parameters, Basic data, Corp store, Installation policy, and Summary. Below the progress bar, a prompt asks to 'Select the type of the configuration you want to add'. Under the heading 'Configuration types from category: Security', three options are listed: 'Cisco Secure Endpoint (AMP) iOS settings' (selected), 'Cisco Umbrella iOS settings', and another 'Cisco Umbrella iOS settings'. Each option has associated OS versions listed to its right. At the bottom right, there are 'Back' and 'Next' buttons.

Configuration type	Supported OS versions
<input checked="" type="radio"/> Cisco Secure Endpoint (AMP) iOS settings	iOS 15.1, iPadOS 15.1, iOS 15.0...
<input type="radio"/> Cisco Umbrella iOS settings	iOS 15.1, iPadOS 15.1, iOS 15.0...
<input type="radio"/> Cisco Umbrella iOS settings	iOS 15.1, iPadOS 15.1, iOS 15.0...

In the next step, upload the previously prepared file.

The screenshot shows the 'New configuration' wizard at the 'Configuration parameters' step. The progress bar shows 'Platform' and 'Configuration type' as completed steps. The main area prompts the user to 'Set the desired parameters for the configuration' and shows the selected 'Configuration type: Cisco Secure Endpoint (AMP) iOS settings'. On the left, there is a sidebar with 'All parameters' and 'Main parameters' sections. The main content area includes a search bar and a file upload section labeled 'Upload Cisco Secure Endpoint (AMP) configuration...' with a 'Select file to upload' button and an upload icon. At the bottom right, there are 'Back' and 'Next' buttons.

Then go through the steps until the confirmation screen.

New configuration

Platform Configuration type Configuration parameters Basic data Corp store Installation policy Summary

All done! Check the correctness of the data. If everything is correct, you can create a new configuration

Configuration name: CSE Settings
Configuration type: Cisco Secure Endpoint (AMP) iOS settings
Platforms: iOS 15.1, iPadOS 15.1, iOS 15.0...
Available to everyone in the Corp store: No
Selected user groups (Corp store): None
Selected device groups (Corp store): None
Install automatically: No

The new configuration has been successfully created. Choose what you want to do next.

Go to configuration list Edit created configuration Create another configuration

Back Create configuration

When the configuration is complete, add it to the Cisco Security Connector application. Go back to the APPLICATIONS tab and go to the Cisco Security Connector application.

Icon	Name	Version	Platforms	Store type	Source	Created on
	Cisco Security Connector	1.5.3	iOS 15.0, iPadOS 15.0,...	Apple App Store	Link	2 months ago

Then go to the Configurations tab, select the configuration method - Predefined.

Choose configuration method

IOS Managed Configuration Predefined configuration

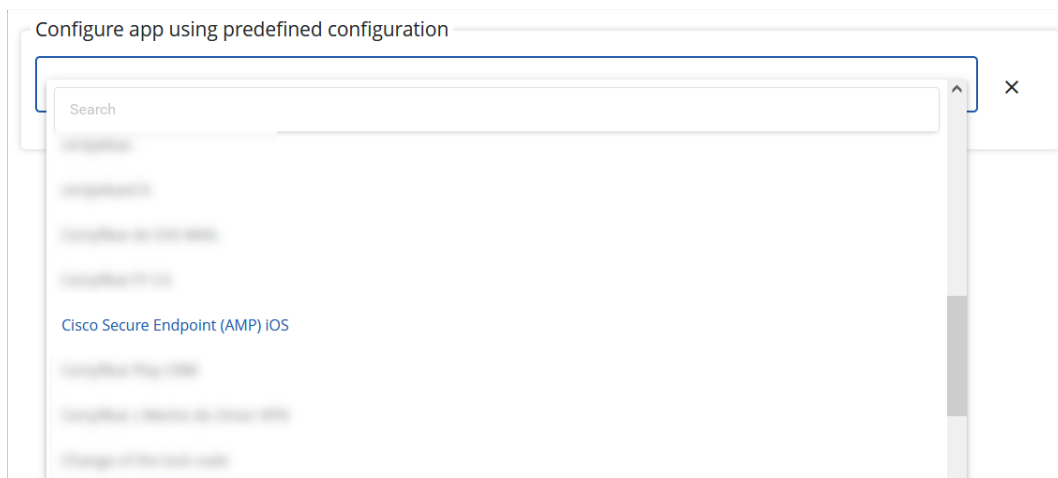

Configure app using predefined configuration

Cisco Secure Endpoint (AMP) iOS

Name: Cisco Security Connector
Version: 1.5.3
